

April 19, 2022

The Honorable Rosa DeLauro, Chair  
House Committee on Appropriations  
2413 Rayburn House Office Building  
Washington, DC 20515

The Honorable Kay Granger, Ranking Member  
House Committee on Appropriations  
1026 Longworth House Office Building  
Washington, DC 20515

The Honorable Chellie Pingree, Chair  
Subcommittee on Interior, Environment and  
Related Agencies  
2007 Rayburn House Office Building  
Washington, DC 20515

The Honorable David Joyce, Ranking Member  
Subcommittee on Interior, Environment and  
Related Agencies  
2065 Rayburn House Office Building  
Washington, DC 20515

Dear Chairmen DeLauro and Pingree and Ranking Members Granger and Joyce:

On behalf of the Business Council for Sustainable Energy (BCSE), I am writing to request robust funding in the Fiscal Year 2023 Interior, Environment and Related Agencies Appropriations Bill for offices and programs impacting clean energy at the Environmental Protection Agency (EPA) and at the Department of Interior (DOI).

The BCSE is a coalition of companies and trade associations from the energy efficiency, energy storage, natural gas, renewable energy, sustainable transportation and emerging decarbonization technology sectors. It includes independent electric power producers, investor-owned utilities, public utilities, equipment manufacturers, commercial end users and service providers in energy and environmental markets. Founded in 1992, the coalition's diverse business membership is united around the revitalization of the U.S. economy and the creation of a clean, secure and reliable energy future in America.

The BCSE is pleased to have an independent small- and medium-size businesses initiative under its banner, the Clean Energy Business Network (CEBN). Together, the BCSE and CEBN represent a broad range of the clean energy economy, from Fortune 100 companies to small businesses working in all 50 states and over 350 Congressional districts. On a national basis, these industries support over 3 million U.S. jobs.

### **Environmental Protection Agency Clean Energy Programs**

As a business group working to advance clean energy policies, BCSE has seen first-hand the importance of the federal role EPA fills in sharing information about new technologies and practices to help speed adoption of clean energy, and to allow consumers to make more informed decisions about energy usage. EPA initiatives help businesses manage environmental issues, foster transparency and best practices in emissions and water management, and leadership in environmental stewardship and sustainability. EPA also provides transparent, standardized, and independent data and expertise that cannot be replicated with the same credibility by private sector or non-governmental organizations.

BCSE requests funding for Environmental Agency programs including the **CHP Partnership, Green Power Partnership, Natural Gas Star, Methane Challenge, AgStar, Center for Corporate Climate Leadership, SmartWay Transport Partnership,** and others, which embody longstanding public-private endeavors that benefit American businesses and help them continue to compete on a global scale. These EPA initiatives provide market transparency, encourage voluntary action, and identify companies that are leaders in businesses and in environmental protection. Additionally, EPA's laboratories lead the world in capabilities that make the United States preeminent in research and analysis which supports private sector capabilities to enhance economic growth and emissions reductions simultaneously.

**The ENERGY STAR program** has a proven track record of success. Through brand recognition, information and positive publicity, the ENERGY STAR program has provided the catalyst for many consumers, homeowners, businesses, and state and local governments to invest in energy efficiency. BCSE requests a doubling of funding for the ENERGY STAR program in FY2023.

**The Renewable Fuel Standard,** which is implemented by the **Office of Transportation and Air Quality,** has enabled the biomass and biogas industry to help meet lower carbon energy needs. The Council encourages funding for EPA for the processing of pathways and applications to enable biomass, biogas, renewable natural gas (RNG), and waste-to-energy projects to produce RINs for electricity. Electricity derived from biogas, RNG, renewable biomass, and solid forms of biomass, is currently being used as a transportation fuel and should be credited accordingly under the RFS program. Congress should appropriate \$1 million in funding for EPA to take final action within 90 days, on any registration application or pathway petition to participate in the Renewable Fuels Pathway II Rule which has been pending for more than one year.

EPA's **State and Local Climate and Energy Program** offers expertise about energy efficiency, renewable energy, and climate change policies and programs to interested state, local, and tribal governments. By providing these resources, EPA removes barriers that would otherwise prohibit action at the local level due to resource constraints or lack of information on best practices. Through its programs on renewable energy, renewable natural gas (RNG), natural gas, combined heat and power and energy efficiency, EPA encourages the use of clean, efficient, and market ready technologies that can lower costs and improve resilience in addition to lowering emissions.

EPA is also engaged in a variety of international activities to advance climate change science, monitor our environment, and promote activities that reduce greenhouse gas emissions. EPA establishes partnerships, provides leadership, and shares technical expertise to support these activities.

### **Department of Interior Clean Energy Programs**

The Department of Interior has a critical role in renewable energy production on public lands and waters and BCSE requests funding to facilitate this transition to clean energy.

The **Bureau of Ocean Energy Management's (BOEM) Office of Renewable Energy Programs (OREP) and Environmental Studies Program (ESP)** play crucial roles in the development of offshore wind energy. Providing additional resources to these offices will help the processing of permits for an unprecedented number of offshore wind projects while allowing the Department to conduct additional lease sales and identify new lease areas on the Outer Continental Shelf. A doubling of funding is needed for the **Bureau of Safety and Environmental Enforcement (BSEE)** to ensure safety while deploying offshore wind projects. BCSE also supports funding for the **Bureau of Land Management** renewable energy program and for an increase in funding for planning and consultation services and staff at the **Fish and Wildlife Service (FWS)** needed for Endangered Species Act evaluations.

The Council welcomes the opportunity to share information from the 2022 edition of the [Sustainable Energy in America Factbook](#) which shows that despite the lingering pandemic, global supply chain bottlenecks, rising inflation, and considerable uncertainty in 2021, the clean energy and energy efficiency transition continued, with a record-breaking year for deployment of renewable power, battery storage and sustainable transportation, and an unprecedented injection of new capital into companies, technologies and projects. We encourage you to build upon this momentum with sustained support for clean energy programs in FY2023.

BCSE looks forward to working with you throughout the FY2022 budget cycle. Please feel free to reach out to Ruth McCormick at [rmccormick@bcse.org](mailto:rmccormick@bcse.org) with any questions or to arrange a time to meet.

Sincerely,

Lisa Jacobson  
President  
Business Council for Sustainable Energy
