**BCSE Comments on FERC Rulemaking Process
for Regional Transmission Planning**

Washington, D.C. – The Business Council for Sustainable Energy (BCSE) submitted [comments](#) to the Federal Energy Regulatory Commission (FERC) today in response to FERC’s Notice of Proposed Rulemaking on reforms to its regional transmission planning processes.

“Investments in transmission enhance reliability and resilience, lower consumers’ power costs, and achieve public policy goals,” said BCSE President Lisa Jacobson. “Successful transmission planning processes are essential to facilitating the energy transition and will support grid modernization and emissions reductions, as well as family-sustaining jobs.”

“BCSE supports FERC taking action to reform regional transmission planning processes,” she added. “We encourage FERC to adopt holistic and efficient approaches to these procedures.”

###

The Business Council for Sustainable Energy (BCSE) is a coalition of companies and trade associations from the energy efficiency, natural gas and renewable energy sectors, and also includes investor-owned utilities, public power, independent power producers, project developers, equipment manufacturers, and environmental and energy market service providers. Established in 1992, the Council advocates for policies that expand the use of commercially-available clean energy technologies, products and services.
